AMENDMENT TO THE CLAIM

Claim 1 has been amended herein. Claims 2-4 have been added herein. The

following replaces all prior versions and listings of the claim.

Listing of the Claims

1. (Currently Amended) A safety belt web adjuster, comprising:

a first horizontal member having first and second ends;

a second horizontal member having third and fourth ends;

a first vertical member having a top surface and a bottom surface extending

between the first and third ends;

a second vertical member having a top surface and bottom surface extending

between the second and fourth ends;

a first ear extending away from the junction between the second horizontal

member and first vertical member; and

a second ear extending away from the junction between the second horizontal

member and the second vertical member; and

a third horizontal member further having a first substantially c-shaped end and a

second substantially c-shaped end;

wherein the first substantially c-shaped end engages the first vertical member

around both the top and bottom surfaces;

wherein the second substantially c-shaped end engages the second vertical

member around both the top and bottom surfaces; and

wherein the third horizontal member is free to slide between the first and second

horizontal member as well engaging the first and second vertical members around both

the top and bottom surfaces; and

wherein said ears prevent said third horizontal member from sliding past said

ears.

2. (New) A safety belt apparatus comprising:

a web adjuster comprising:

a first horizontal member having first and second ends;

a second horizontal member having third and forth ends;

a first vertical member having a top surface and a bottom surface

extending between the first and third ends;

a second vertical member having a top surface and bottom surface

extending between the second and fourth ends;

a first ear extending away from the junction between the second

horizontal member and first vertical member; and

a second ear extending away from the junction between the second

horizontal member and the second vertical member;

a third horizontal member further having a first substantially c-shaped end

and a second substantially c-shaped end;

wherein the first substantially c-shaped end engages the first vertical

member around both the top and bottom surfaces;

wherein the second substantially c-shaped end engages the second vertical

Response to Office Action mailed June 28, 2005

member around both the top and bottom surfaces; and

wherein the third horizontal member is free to slide between the first and

second horizontal member as well engaging the first and second vertical members around

both the top and bottom surfaces when said web adjuster has been rotated at least 45

degrees from a first position to a second position.

3. (New) The safety belt apparatus of claim 2, wherein said web adjuster has been

rotated at least 90 degrees from a first position to a second position.

4. (New) A safety belt apparatus comprising:

a web adjuster comprising:

a first horizontal member having first and second ends;

a second horizontal member having third and forth ends, the second

horizontal member defining an opening therethrough;

a first vertical member having a top surface and a bottom surface

extending between the first and third ends;

a second vertical member having a top surface and bottom surface

extending between the second and fourth ends; and

a third horizontal member further having a first substantially c-shaped end

and a second substantially c-shaped end;

wherein the first substantially c-shaped end engages the first vertical

member around both the top and bottom surfaces;

Attorney Docket No.: 31104-006

Now Under: 31163-2

wherein the second substantially c-shaped end engages the second vertical

member around both the top and bottom surfaces; and

wherein the third horizontal member is free to slide between the first and

second horizontal member as well as engaging the first and second vertical members

around both the top and bottom surfaces; and

a first strap enclosed around the first horizontal member;

a second strap enclosed around the third horizontal member; and

a third strap passing through the opening defined in the second horizontal

member.
